

1. Add a table-level PRIMARY KEY constraint to the EMP table on the ID column. The constraint should be named at creation. Name the constraint my_emp_id_pk.

The screenshot shows a SQL interface with a dark theme. At the top, there's a header "SQL Commands" with an upward arrow. Below it, a toolbar contains "Language" (set to SQL), "Rows" (set to 10), "Clear Command", and "Find Tables". A command input area shows two lines of SQL code: `1 ALTER TABLE EMP` and `2 ADD CONSTRAINT my_emp_id_pk PRIMARY KEY(ID);`. Below the code, a tabbed interface has "Results" selected, showing the message "Table altered." and a duration of "0.06 seconds". Other tabs include "Explain", "Describe", "Saved SQL", and "History".

```
1 ALTER TABLE EMP
2 ADD CONSTRAINT my_emp_id_pk PRIMARY KEY(ID);
```

Results Explain Describe Saved SQL History

Table altered.

0.06 seconds

2. Create a PRIMARY KEY constraint to the DEPT table using the ID column. The constraint should be named at creation. Name the constraint my_dept_id_pk.

The screenshot shows the same SQL interface as above. The command input area now shows: `1 ALTER TABLE DEPARTMENT_TABLE` and `2 ADD CONSTRAINT my_dept_id_pk PRIMARY KEY(DEPT_ID);`. The "Results" tab shows "Table altered." and "0.06 seconds".

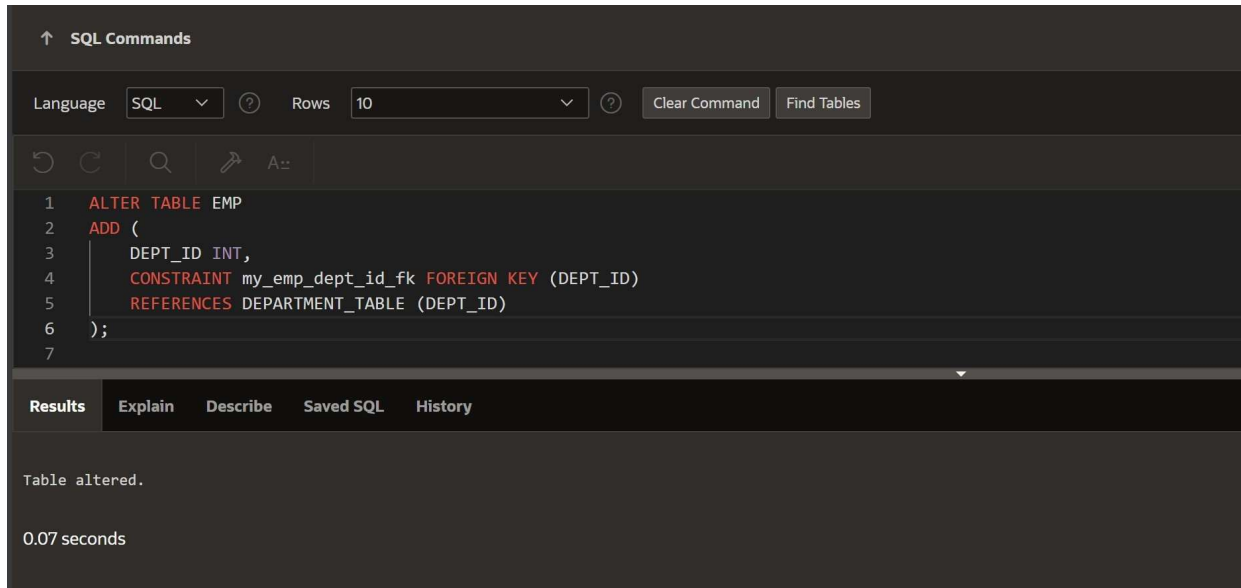

```
1 ALTER TABLE DEPARTMENT_TABLE
2 ADD CONSTRAINT my_dept_id_pk PRIMARY KEY(DEPT_ID);
```

Results Explain Describe Saved SQL History

Table altered.

0.06 seconds

3. Add a column DEPT_ID to the EMP table. Add a foreign key reference on the EMP table that ensures that the employee is not assigned to nonexistent department. Name the constraint my_emp_dept_id_fk.

The screenshot shows a SQL interface with a command window and a results pane. The command window contains the following SQL statement:

```
1 ALTER TABLE EMP
2 ADD (
3     DEPT_ID INT,
4     CONSTRAINT my_emp_dept_id_fk FOREIGN KEY (DEPT_ID)
5     REFERENCES DEPARTMENT_TABLE (DEPT_ID)
6 );
7
```

The results pane shows the message "Table altered." and the execution time "0.07 seconds".

4. Modify the EMP table. Add a COMMISSION column of NUMBER data type, precision 2, scale 2. Add a constraint to the commission column that ensures that a commission value is greater than zero.

The screenshot shows a SQL interface with a command window and a results pane. The command window contains the following SQL statement:

```
1 ALTER TABLE EMP
2 ADD (
3     COMMISSION NUMBER(2,2)
4     CONSTRAINT check_commission_positive CHECK (COMMISSION > 0)
5 );
6
```

The results pane shows the message "Table altered." and the execution time "0.05 seconds".
